Henne van Heeren studied chemistry at the University of Utrecht and worked at the University Delft in the area of material science. At Philips Electronics he was responsible as operation manager for a magnetic head / MEMS waferfab. He followed his career as a business development manager at Philips and OnStream. After 17 years in the industry Henne started his own company in 2003 and initiated the enablingMNT group, now having offices in Germany, UK and the Netherlands. He assisted several high tech start-up companies and established companies on industrialization and commercialization issues. He lectured for the NATO on nanotechnology and published over 60 articles and reviews about the development and industrialization of MEMS/MST products, including three guidelines for microfluidic design and manufacturing. Henne initiated a discussion on microfluidic standardization, resulting in a New Work Item proposal to International Standards Organization (ISO).
